Pre-requisite	

Co-requisite	

Anti-requisite	

Course Description	This course is aimed at exposing students to the basic concepts of Big Data and associated technologies for the complete Big Data Management Life Cycle namely Big Data Processing, Big Data Storage and Big Data Visualization. Technologies like Apache Hadoop, Map Reduce, HDFS, Apache Spark, MongoDB are discussed.

Course Abstract	This course, "Big Data Analytics and Data Visualization," addresses the critical need to process and interpret massive datasets in the digital age. Beginning with the foundational 5 V's and the architectural challenges of high-volume data, students transition into the technical core of distributed computing. The curriculum explores the industry-standard Apache Hadoop ecosystem for scalable storage and MapReduce processing. It then advances to Apache Spark to master high-speed, in-memory analytics using Resilient Distributed Datasets (RDDs). To handle diverse data types, the course covers NoSQL paradigms and MongoDB implementation, emphasizing the CAP theorem and flexible schema design. Finally, the focus shifts to data visualization, where students apply statistical analysis and design principles to create impactful visual narratives using techniques like heat maps and box plots. By blending data engineering with visual storytelling, this course prepares learners to transform raw, complex information into actionable business insights.

Course Objectives	1. Describe big data and use cases from selected business domains. 2. Explain No Sql big data management. 3. Install, configure, and run Hadoop and HDFS. 4. Perform map-reduce analytics using Hadoop. 5. Use related tools such as Apache Spark and MongoDB for big data analytics. 6. Study various DV chart/diagrams.

Course Outcomes	CO1. Describe Big Data Use Cases in a given business scenario. CO2. Operate NOSQL database management system MongoDB. CO3. Visualize a given big data problem in terms of Map Reduce and implement it on Apache Hadoop Framework. CO4. Implement a given big data solution on Apache Spark Platform. CO5. Work with the HDFS file management system. CO6. Recommend/Suggest an appropriate DV representation/diagram for a given business analytics representation use case.
Course Typology	Theory
Course Outline	The course is structured across five progressive units designed to build technical and analytical proficiency. Unit 1 introduces Big Data fundamentals, including the 5 V's and the limitations of traditional systems. Unit 2 focuses on Apache Hadoop, covering HDFS architecture and the MapReduce programming model. Unit 3 transitions to Apache Spark, emphasizing its in-memory computing advantages and RDD-based operations for real-time analytics. Unit 4 explores the NoSQL landscape, specifically delving into MongoDB's document-oriented architecture, CRUD operations, and the CAP theorem to manage non-relational data. Finally, Unit 5 focuses on Data Visualization, teaching students to perform univariate, bivariate, and multivariate analysis. Students will master a variety of graphical representations—including scatter plots, heat maps, and box and whisker plots—to communicate findings effectively. This structured progression ensures students gain end-to-end expertise, moving from data ingestion and processing to sophisticated visual communication and storytelling.
Pedagogy	Regular lectures, Case Studies & Group Discussion, Simulation & Demonstration, and Experiential / Live Coding
Expectations from Students	1. Code of Conduct & Academic Integrity • Professionalism: Maintain a respectful learning environment. This includes maintaining silence during lectures and ensuring your behavior does not distract or harass others. • Academic Honesty: There is a zero-tolerance policy for plagiarism. All submitted work, assignments, and code must be your own. • Preparation: Arrive at every session having reviewed previous materials and ready to engage with the day's topic. 2. Attendance & Punctuality Attendance is mandatory and will be recorded within the first 10 minutes of every session. • Punctuality Rule: * 0–5 Minutes Late: Recorded as "Present." o 5–10 Minutes Late: Recorded as a "Late Arrival." o After 10 Minutes: Recorded as "Absent." • Late Arrival Penalty: Every three (3) late arrivals will be calculated as one (1) absence. • Eligibility for End-Semester Exam without grade drop | Minimum 80% attendance. Eligibility for Examination | Minimum 50% attendance. Below 50% Attendance - Mandatory re-registration of the course. 3. Absence & Medical Leave • Planned Absences: Notify the instructor via email at least 24 hours in advance. • Unplanned/Emergency Absences: Contact the instructor within 24 hours of the missed class. • Medical Leave: Official proof/documentation must be submitted within three (3) days of your return to class. • Responsibility: It is the student's sole responsibility to catch up on missed content and announcements. 4. Participation & Performance • Active Engagement: Students are expected to actively engage in class discussions and participate in all scheduled reviews. • Assessments: You are expected to turn in all homework/assignments on time and achieve passing marks in both Midterm and Final examinations. • Presentations: Demonstration of your work through in-class presentations is a core requirement of this course. 5. Ethical Use of AI and Public Datasets In the context of Big Data Analytics, the following rules apply to all technical work: • AI as a Collaborator: You may use Generative AI (e.g., Gemini, ChatGPT, Copilot) to debug code, explain concepts, or brainstorm visualization ideas. However, you may not use AI to generate entire reports or complete scripts. • The "Oral Defense" Requirement: You must be able to explain the logic of every line of code you submit. If you cannot explain your code during an in-class review, it will be treated as a violation of academic integrity. • Public Data Attribution: When using datasets from Kaggle, AWS, or other repositories, you must provide a full citation. While the data is public, the analytical insights and processing steps must be your original work. • Disclosure Statement: All major project submissions must include an "AI Disclosure Statement" detailing which tools were used and for what specific tasks. • Anti-Collusion: While high-level discussion with peers is encouraged, sharing code files or NoSQL schemas is strictly forbidden and considered collusion. 6. Generative AI Disclosure Statement For all major project submissions, you must include an "AI Disclosure Statement" at the end of your report, detailing: 1. Which AI tools were used (if any). 2. Which specific tasks the AI assisted with (e.g., "AI was used to debug the Spark-MongoDB connector"). 3. A certification that the final analysis and conclusions are the student's original work. +------------------+--+ | Activity | AI/Resource Policy | +------------------+--+ | Weekly Labs | Permitted for debugging and syntax help. | +------------------+--+ | Quizzes/Exams | Strictly Prohibited. | +------------------+--+ | Final Project | Permitted for logic brainstorming; | | | must be disclosed. | +------------------+--+ | Data Visualization | Must cite all external data | | | sources and design inspirations. | +------------------+--
Assessment / Evaluation	
Project / Assignment Details	Students will complete a comparative lab measuring Spark's scalability against standard Python, followed by a NoSQL task focused on optimizing MongoDB schemas for real-time data. They will also perform exploratory analysis on large datasets to identify hidden patterns. The course concludes with a group project involving the ingestion of 5GB+ of data into HDFS, processing with Spark MLlib, and presenting findings via an interactive dashboard. The AWS Academcy course(s) is(are) recommended to gain in-depth insights.
Course Material	Text books: 1. Practical Big Data Analytics, Nataraj Dasgupta, Packt Publishing 2. Big Data Analytics, Venkat Ankam, Packt Publishing 3. Fundamentals of Data Visualization, Claus Wilke, Oreilly Publishing Reference books: 1. Big Data Analytics for Market Intelligence, Darwish & Dina, Packt Publishing 2. Effective Cyber Security: William Stallings, Addison Wesley Publishers
Additional Information	• Software & Hardware Requirements: Students are expected to have a laptop with at least 8GB RAM and 50GB of free disk space to run local clusters. We will primarily use open-source environments like Ubuntu/Linux, Docker, and Databricks Community Edition. • Dataset Resources: For projects, students are encouraged to explore repositories such as Kaggle, UCI Machine Learning Repository, and AWS Open Data Registry. • The "Visualization Portfolio": Beyond passing grades, students are encouraged to document their final dashboard projects on platforms like GitHub or Tableau Public to build a professional portfolio for future job placements. • Design Ethics: Students must adhere to the "Principle of Truthful Data." Any manipulation of visual scales to exaggerate findings will be penalized as a breach of professional ethics.

Session Plan	Topic Title	Session No.	Topic & Subtopic Details	Readings, Cases, etc.	Activities	Important Dates
	Unit 1: Introduction	1	Concept of Big Data: Origins and Evolution	Dasgupta (Ch 1)	Brainstorming: "What data did you generate today?"	
		2		Ankam (Ch 1)	Case Study: Analyzing the 5 V's of Uber/Netflix.	
		3	Types of Big Data: Structured vs. Unstructured	Dasgupta (Ch 1)	Identifying data formats in a sample dataset.	
		4	Semi-structured Data: XML and JSON formats	Ankam (Ch 1)	Practice: Parsing a simple JSON file.	
		5	Popular Applications of Big Data Analytics	Ankam (Ch 2)	Group discussion on Big Data in Healthcare.	
		6	Issues and Challenges in Big Data Solutions	Dasgupta (Ch 1)	Debate: Privacy vs. Personalization.	
	Unit 2: Hadoop & MapReduce	7	Concept and Need for Apache Hadoop Framework	Ankam (Ch 3)	Intro to Distributed Systems vs Centralized.	
		8	Hadoop Eco System: Component Overview	Ankam (Ch 3)	Mapping tools to stages of data pipeline.	
		9	Hadoop Basic Architecture: NameNode/DataNode	Dasgupta (Ch 2)	Diagram labeling.	
		10	Installation of Hadoop: Prerequisites	Dasgupta (Ch 2)	Step-by-step installation guide review.	
		11	Operational Modes: Standalone & Pseudo-distributed	Dasgupta (Ch 2)	Configuration file walkthrough (xml files).	
		12	HDFS Architecture: Blocks and Replication	Ankam (Ch 4)	Calculation: Storage required for replicated data.	
		13	HDFS Operations and CLI Commands	Ankam (Ch 4)	Hands-on: File upload/download via terminal.	
		14	MapReduce Concept: The Programming Model	Dasgupta (Ch 3)	Logic building: Understanding Key-Value pairs.	
		15	MapReduce Example: WordCount walkthrough	Dasgupta (Ch 3)	Manual trace of a WordCount execution.	
		16	Constraints of Hadoop/HDFS/MapReduce	Ankam (Ch 4)	Discussion: When is Hadoop not the answer?	
	Unit 3: Apache Spark	17	Concept and Need for Apache Spark	Dasgupta (Ch 4)	Comparison: Spark vs. MapReduce.	
		18	Spark Architecture: Drivers and Executors	Dasgupta (Ch 4)	Architecture mapping.	
		19	Spark Installation and Environment Setup	Ankam (Ch 5)	Verifying Spark Shell (PySpark/Scala).	
		20	Operational Modes: Local vs. Cluster Mode	Ankam (Ch 5)	Resource allocation discussion.	
		21	Spark Basic Operations: Reading Data	Dasgupta (Ch 4)	Loading CSV/Text files into Spark.	
		22	Introduction to RDD (Resilient Distributed Datasets)	Ankam (Ch 5)	Understanding Immutability and Partitioning.	
		23	RDD Programming: Transformations (Map, Filter)	Ankam (Ch 5)	Coding: Applying transformations to a list.	
		24	RDD Programming: Actions (Collect, Reduce, Count)	Ankam (Ch 5)	Coding: Triggering Spark jobs with actions.	
		25	Directed Acyclic Graph (DAG) in Spark	Dasgupta (Ch 4)	Visualizing the execution plan of a Spark job.	
		26	Lazy Evaluation Concept in Spark	Dasgupta (Ch 4)	Experiment: Observing when code actually runs.	
		27	Key-Value Pair RDDs and Joins	Ankam (Ch 5)	Practice: Joining two datasets in Spark.	
		28	Spark Persistence and Caching Strategies	Dasgupta (Ch 4)	Optimization: Comparing runtimes with cache.	
	Unit 4: NoSQL & MongoDB	29	Concept and Need for NoSQL; Application Areas	Ankam (Ch 6)	Market analysis: Why NoSQL is booming.	
		30	NoSQL Architectures: Key-Value, Document, Column	Ankam (Ch 6)	Identifying use-cases for each type.	
		31	Differences: Conventional RDBMS vs. NoSQL	Dasgupta (Ch 5)	Comparison Table creation.	
		32	ACID vs. BASE Systems	Ankam (Ch 6)	Logic session: Availability vs Consistency.	
		33	CAP Theorem and its detailed working	Ankam (Ch 6)	Case studies of CP, AP, and CA systems.	
		34	MongoDB Architecture and Basic Components	Dasgupta (Ch 5)	Understanding BSON vs JSON.	
		35	MongoDB Operations: Collection & Document Creation	Dasgupta (Ch 5)	Lab: Creating your first database and collection.	
		36	MongoDB Operators: Querying and Updating	Dasgupta (Ch 5)	Practice: Using $set, $inc, and $push.	
		37	MongoDB Advanced Features: Indexing	Ankam (Ch 6)	Performance Test: Querying with/without Index.	
		38	Aggregation Framework in MongoDB	Dasgupta (Ch 5)	Building a data pipeline with $match and $group.	
	Unit 5: Visualization	39	Concept and Need for Data Visualization	Wilke (Ch 1)	Presentation: Impact of visualization on business.	
		40	Effective Data Visualization Tips and Techniques	Wilke (Ch 2)	Critique: Analyzing "bad" charts from the web.	
		41	Univariate Analysis: Bar and Line Charts	Wilke (Ch 3)	Practical: Plotting frequency distributions.	
		42	Bivariate Analysis: Scatter Plots and Correlations	Wilke (Ch 4)	Practical: Identifying trends in 2D space.	
		43	Multivariate Analysis: Heat Maps and Bubble Charts	Wilke (Ch 5)	Practical: Visualizing complex relationships.	
		44	Box and Whisker Plots for Statistical Analysis	Wilke (Ch 6)	Interpreting quartiles/outliers.	
		45	Guidelines for Use Cases & Representation selection	Wilke (Ch 9)	Project: Selecting the right chart for a final dataset.

TEACHING PLAN

Data Science and Machine Learning (CMP707)

Faculty	Gauravkumarsingh Gaharwar	Division	A & B
Contact	gauravsinghg@nuv.ac.in	Office Hours	Friday: 03.00 pm to 04.00 pm
School	School of Engineering and Technology		
Program	BTech(CSE)		
Semester	Autumn	Credits	3
Academic Year	2026-27		
Lecture time & Weekdays	Wednesday (1600 Hrs – 1700 Hrs) Thursday (1000 Hrs – 1100 Hrs) Friday (1300 Hrs – 1400 Hrs)	Location	A702 A701 A701
Pre-requisites			
Course Description	This course introduces the fundamental concepts of Data Science and Machine Learning. It covers Python programming for data science, statistical methods, supervised and unsupervised learning, regression, classification, recommendation systems, and neural networks. The course focuses on applications to real-world problems and developing the skills necessary for data-driven decision-making.		
Course Abstract *			
Course Objectives	1. Introduce the field of Data Science and its applications. 2. Build a strong foundation in statistics and data visualization. 3. Teach core supervised and unsupervised machine learning methods. 4. Explore modern techniques in deep learning and recommendation systems. 5. Enable students to build end-to-end data science projects.		
Learning Outcomes	*After completing this course, students will be able to* *CO1. Apply Python and statistical techniques to real-world data.* *CO2. Build and validate machine learning models.* *CO3. Interpret model results and apply them to decision-making.* *CO4. Understand and implement recommendation systems and neural networks.*		
Typology of Course	Theory / Tutorial		
Course Outline (Units, Hours, Textbooks, Reference Books)	**Unit 1: Introduction to Data Science and Python:** Introduction to Data Science, Python Basics, Numpy, Pandas, Data Visualization **Unit 2: Statistics and Probability for Data Science:** Descriptive and Inferential Statistics, Probability Distributions, Hypothesis Testing **Unit 3: Supervised Learning:** Regression, Classification, Logistic Regression, KNN, SVM, Evaluation Metrics **Unit 4: Unsupervised Learning:** Clustering, PCA, Dimensionality Reduction, Anomaly Detection		

	Unit 5: Recommendation Systems and Deep Learning: Collaborative Filtering, Neural Networks, CNNs, Applications
Pedagogy	Explaining each topic with an example and then allow students to solve similar types of problems
Expectations from Students *	Students should attend 100% of classes Timely submission of assignments
Assessment / Evaluation	Class Tests, Surprise Test, Research Paper, Presentation, Class Participation
Attendance Policy	The University expects 100% attendance, but a minimum of 80% attendance is mandatory in each course to be eligible to appear for the end-semester examination of the course. a) Dean/Head of the School can recommend the attendance upto 15% in the course or courses for representing the university at any regional, national or international competition in the field of academics or sports or due to long duration ill-health or other emergency situations. Provost based on the case submitted by Registrar's Office with recommendation of the Dean/School head will take decision. b) For beyond 15% in any genuine cases, the decision to condone the attendance will be taken by the Provost on merits of the case. c) Documentary evidence is required to receive excusable absence and should be submitted to the Provost with the recommendation of the Dean/Head of the School. d) A student not meeting the attendance requirements in a course will not be allowed to appear for the regular end semester examination and will be awarded 'F' grade in that course. However, she/he may be permitted for re-examination. e) A student with very low attendance i.e. less than 65% in all courses during the current semester may not be allowed to appear for regular end semester examination. She/he will have to re-register all courses during the next academic year. f) Students playing individual sports or team sports at regional/national/international level with authorized sports body of the respective games will be exempted from attendance during match/competition days as well as during practice session/camps on producing relevant documents.
Project / Assignment Details *	
Course Material	**Reference Books:** 1. Joel Grus, "Data Science from Scratch", O'Reilly Media. 2. Aurélien Géron, "Hands-On Machine Learning with Scikit-Learn, Keras, and TensorFlow", O'Reilly Media. 3. Trevor Hastie, Robert Tibshirani, and Jerome Friedman, "The Elements of Statistical Learning". 4. Ian Goodfellow, Yoshua Bengio, and Aaron Courville, "Deep Learning", MIT Press.
Additional Information *	

* These are optional fields.

Pre-requisite	
Co-requisite	
Anti-requisite	
Course Description	Natural Language Processing (NLP) or Computational Linguistics is gaining popularity due to better computational facilities available on personal computers and mobile systems. None of the single natural language dominates the world. To cater to the need of the scenario, study of NLP cannot be overlooked. Applications of NLP are pervasive, because people communicate through spoken and written language hence the need for NLP and its peripheral knowledge is evident. The course is designed to expand knowledge about NLP, Language Analysis and Modeling Techniques, studying nature of Indian languages, Morphology, Semantics, Parsing, Disambiguation, Hybrid techniques of processing, Basics of Machine Translation, Information Retrieval, Text Summarization etc.
Course Abstract	-
Course Objectives	Introduce students to 1. Language Dynamics 2. To understand deviations between Natural and Formal languages. 3. Grammar and Language understanding and modeling. 4. Morphology, Parsing Techniques, ML and DL for Language processing. 5. Analysis and Implementation of NLP based algorithms and applications.
Course Outcomes	CO1. Basics understanding of NLP elements, scripts, speech, divergence pattern and morphological functions. CO2. NLP element processing, encodings, regular expression, tokenization, and pattern matching. CO3. Implementing different vectorization methods, Machine Learning and Deep Learning model for NLP. CO4. Implementation of sequence learning through RNN, LSTM, Sequence to Sequence, transformer-based model. CO5. Basic understanding of small and large language models.
Course Typology	Theory
Course Outline	**Introduction to Natural Language Processing (NLP)** Natural Language Understanding, Natural Language Generation, History of natural languages and written scripts, Natural Language Genesis, Divergence in different language categories. **Language Structure** Structure of word, Tokens, Lexemes, Morphemes, Ambiguity, Regular Expression, Automata, Finite State Machines, Transducer, String Regex Patterns, Tokenizers, Word Order and Grammar. **Elements of Natural Language and Preprocessing Text** Knowing characters, Unicode and UTF-8, Transliteration, Romanization, Tokens, Types of Tokenizers, Stopwords, Stemming and Lemmatization, Normalization of Text, Morphology, Parts-of-Speech Tagging, Syntactic Parsing, Semantic Parsing, Language Modelling, Probabilistic Modelling, Vectorization, BoW, TF-IDF, N-Grams, One-Hot Encoding, Label Encoding, Zips Law. **Machine Learning for Natural Language Processing** Feature Engineering ,Naïve Bayes Classifier, Tree Based Models/Classifier, Linear and Logistic Regression, Support Vector Machine, Deep Learning for NLP, Word Embeddings (Word2Vec, Glove, FastText) **Sequence Processing with Deep Learning** Recurrent Neural Network (RNN), Long Short Term Memory (LSTM), Sequence to Sequence Learning, Stackable Deep Learning for NLP, Transformers, BERT, Introduction to Large Language Models. Applications of NLP, Text Classification, Sentiment Analysis, Summarization, Translation etc.
Pedagogy	Experiential Learning
Expectations from Students	Pre-reads, pre-Lab work before joining the session, Referring research papers pertaining to NLP
Assessment / Evaluation	
Project / Assignment Details	Group Projects and Assignments will be shared with students.
Course Material	Main Reference Books: 1. Hobson Lane, Maria Dyhshel, Natural Language Processing in Action, Second Edition, Manning Publications. 2. Daniel Jurafsky, James Martin, “Speech and Language Processing” – Pearson Education. 3. Daniel Bikel, Imed Zitouni, “Multilingual Natural Language Processing Applications”, Pearson Education, First Edition 2013. 4. Ian Goodfellow, Yoshua Bengio, and Aaron Courville. 2016. Deep Learning. Additional Information	This is an elective course.

Session Plan

Topic Title	Session No.	Topic & Subtopic Details	Readings, Cases, etc.	Activities	Important Dates
Introduction to Natural Language Processing (NLP)	1	Natural Language Understanding, Natural Language Generation, History of natural languages and written scripts	Jurafsky and Martin, "Speech and Language Processing", Ch 1, 16	Lecturing and Class Discussions	-
Introduction to Natural Language Processing (NLP)	2	Natural Language Understanding, Natural Language Generation, History of natural languages and written scripts	Jurafsky and Martin, "Speech and Language Processing", Ch 1, 16	"	-
Introduction to Natural Language Processing (NLP)	3	Natural Language Genesis, Divergence in different language categories.	Jurafsky and Martin, "Speech and Language Processing", Ch 1, 16	Lecturing, Discussions and Application Demo	-
Language Structure	4	Structure of word, Tokens, Lexemes, Morphemes, Ambiguity,	Jurafsky and Martin, "Speech and Language Processing", Ch 1, 2, 4, 16	"	-
Language Structure	5	Regular Expression, Automata, Finite State Machines, Transducer, String Regex Patterns,	Jurafsky and Martin, "Speech and Language Processing", Ch 1, 2, 4, 12	"	-
Language Structure	6	Tokenizers, Word Order and Grammar.	Jurafsky and Martin, "Speech and Language Processing", Ch 1, 2, 4, 12, Hobson Lane et. al, "Natural Language Processing in Action", Ch. 2,3	Lecturing, Discussions and Application Demo	-
Elements of Natural Language and Preprocessing Text	7	Knowing characters, Unicode and UTF-8, Transliteration, Romanization, Tokens, Types of Tokenizers	Jurafsky and Martin, "Speech and Language Processing", Ch 1, 2, 4	"	-
Elements of Natural Language and Preprocessing Text	8	Stopwords, Stemming and Lemmatization	Jurafsky and Martin, "Speech and Language Processing", Ch 1, 2, 4	"	-
Elements of Natural Language and Preprocessing Text	9	Normalization of Text, Morphology, Parts-of-Speech Tagging, Syntactic Parsing, Semantic Parsing, Language Modelling	Jurafsky and Martin, "Speech and Language Processing", Ch 5	"	-
Elements of Natural Language and Preprocessing Text	10	Normalization of Text, Morphology, Parts-of-Speech Tagging, Syntactic Parsing, Semantic Parsing, Language Modelling	Jurafsky and Martin, "Speech and Language Processing", Ch 5, 14	"	-
Elements of Natural Language and Preprocessing Text	11	Probabilistic Modelling, Vectorization	Jurafsky and Martin, "Speech and Language Processing", Ch 5, 6, 14	"	-
Elements of Natural Language and Preprocessing Text	12	BoW, TF-IDF, N-Grams, One-Hot Encoding, Label Encoding, Zips Law.	Jurafsky and Martin, "Speech and Language Processing", Ch 5, 6, 14, Hobson Lane et. al, "Natural Language Processing in Action", Ch. 3, 4	"	-
Elements of Natural Language and Preprocessing Text	13	BoW, TF-IDF, N-Grams, One-Hot Encoding, Label Encoding, Zips Law.	Jurafsky and Martin, "Speech and Language Processing", Ch 5, 6, 14	"	-
Machine Learning for Natural Language Processing	14	Feature Engineering ,Naïve Bayes Classifier, Tree Based Models/Classifier	Jurafsky and Martin, "Speech and Language Processing", Ch 15	"	-
Machine Learning for Natural Language Processing	15	Feature Engineering ,Naïve Bayes Classifier, Tree Based Models/Classifier	Jurafsky and Martin, "Speech and Language Processing", Ch 15	"	-
Machine Learning for Natural Language Processing	16	Feature Engineering ,Naïve Bayes Classifier, Tree Based Models/Classifier	Jurafsky and Martin, "Speech and Language Processing", Ch 15	"	-
Machine Learning for Natural Language Processing	17	Linear and Logistic Regression, Support Vector Machine,	Hobson Lane et. al, "Natural Language Processing in Action", Ch. 5	"	-
Machine Learning for Natural Language Processing	18	Linear and Logistic Regression, Support Vector Machine,	Hobson Lane et. al, "Natural Language Processing in Action", Ch. 5	"	-
Machine Learning for Natural Language Processing	19	Deep Learning for NLP	Hobson Lane et. al, "Natural Language Processing in Action", Ch. 5	"	-
Machine Learning for Natural Language Processing	20	Word Embeddings (Word2Vec, Glove, FastText)	Hobson Lane et. al, "Natural Language Processing in Action", Ch. 6	"	-
Machine Learning for Natural Language Processing	21	Word Embeddings (Word2Vec, Glove, FastText)	Hobson Lane et. al, "Natural Language Processing in Action", Ch. 6	"	-
Sequence Processing with Deep Learning	22	Recurrent Neural Network (RNN), Long Short Term Memory (LSTM), Sequence to Sequence Learning	Hobson Lane et. al, "Natural Language Processing in Action", Ch. 9, 10	"	-
Sequence Processing with Deep Learning	23	Recurrent Neural Network (RNN), Long Short Term Memory (LSTM), Sequence to Sequence Learning	Hobson Lane et. al, "Natural Language Processing in Action", Ch. 5	"	-
Sequence Processing with Deep Learning	24	Recurrent Neural Network (RNN), Long Short Term Memory (LSTM), Sequence to Sequence Learning	Hobson Lane et. al, "Natural Language Processing in Action", Ch. 9, 10	"	-
Sequence Processing with Deep Learning	25	Stackable Deep Learning for NLP	Hobson Lane et. al, "Natural Language Processing in Action", Ch. 9, 10	"	-
Sequence Processing with Deep Learning	26	Transformers, BERT	Refer https://jalammar.github.io/illustrated-transformer/	"	-
Sequence Processing with Deep Learning	27	Transformers, BERT	Refer https://jalammar.github.io/illustrated-transformer/	"	-
Sequence Processing with Deep Learning	28	Introduction to Large Language Models. Applications of NLP, Text Classification, Sentiment Analysis, Summarization, Translation etc.	Refer https://github.com/rasbt/LLMs-from-scratch	"	-
Sequence Processing with Deep Learning	29	Introduction to Large Language Models. Applications of NLP, Text Classification, Sentiment Analysis, Summarization, Translation etc.	Refer https://github.com/rasbt/LLMs-from-scratch	"	-
Revision	30	Revision	--	"	-
